- Charging cycle 6 hours
- Available singularly or in Flightcases with inbuilt charging
- Finished in stainless steel to blend in with any surrounding
- 16 bit dimmer curve for smooth transitions
- Kensington Security lock ready

V&A Museum, London

With restrictions of get-in time and set up, limited power supplies and a requirement for neat installation, LiteWare now allows more solutions with no cabling for power and control, simply deploy the fittings in the desired locations and switch on. Control is simple using W-DMX (Wireless Solutions protocol). Once the look is set, simply turn off your fittings until required and they will return to the previous state when powered up.

Larger events are also catered for with easy to use 10 and 6 way flight cases making transport and deployment of multiple fittings simple. All flightcases are pre-wired with a charging system so at the end of the event you just plug in the flight case to charge all the fittings at once.
